S: Single directional coupler

Special Dual Directional Coupler according to Automotive ISO 11452-9 Road vehicles - Component test methods for electrical disturbances - Part 9: Portable transmitters 142 MHz ... 6 GHz at standardized sub-bands -> Attention: Below 700 MHz there is no continuously usable frequency range with defined coupling attenuation!

OPTIONS

X) custom frequency range and custom coupling attenuation upon request

Notice:

Under normal operating conditions all Directional Couplers do not need to be mounted to a heatsink. However, if the units permanently run into high mismatch conditions at full rated power, the circuits will heat up significantly. In this case, we would recommend the units be mounted to a suitable heatsink or metal surface, capable to maintain a baseplate temperature of +60°C max.

4. Applicable Frequency Range 142 MHz ... 6 GHz at standardized sub-bands

6.2.2 Dual Directional Coupler – Required Performance

- Coupling factor: >20 dB (40 dB recommended)
- Mainline port VSWR: <1.3
- Coupling port VSWR: <1.5
- Transmission Loss: <0.5 dB
- Directivity: >18 dB

The coupling factor (20 ... 40 dB) must be selected for measure forward and reflected power with relation to the sensitivity of the measurement equipment (see 6.2.3 for details).
